SUMMARY

Software engineer with four years of experience designing and shipping large-scale distributed web platforms and APIs in production. End-to-end ownership across system design, deployment, observability, and on-call. Polyglot stack with hands-on work in Java, TypeScript, C#, Python, and Go. Currently building independent projects across fintech, AI tooling, and spatial computing.

EXPERIENCE

Software Engineer | Deloitte U.S.I.

Jul 2022 – Present

Technology Consulting – Enterprise Government Platforms, Bengaluru

- Architected and delivered full-stack features across 12+ distributed enterprise applications using Java, Spring Boot, React, Angular, and Node.js, maintaining 99.9% uptime and sub-200ms response times for 1M+ users across US state government platforms (Oregon Dept. of Health, SNAP, TANF, Dept. of Education).
- Designed scalable GraphQL and REST APIs with Spring Boot, implementing microservices with circuit-breaker patterns, Redis caching, and event-driven integrations across 15+ external services including payment gateways, CRM systems, and identity providers.
- Led delivery of three React and Angular applications in six months: an internal operations dashboard (200+ daily users), a client-facing claims portal, and a reusable component library of 30+ components adopted by four teams, cutting frontend build time by 35%.
- Owned CI/CD pipelines using GitHub Actions with TDD, automated integration testing, and Docker-based deployments to AWS (EC2, S3, Lambda), ensuring zero-downtime releases and full observability.
- Engineered a Power Automate workflow automation pipeline applying OOP design principles, eliminating 80+ hours of manual processing weekly and delivering \$150,000 in annual cost savings.
- Served as technical lead and code reviewer for eight junior engineers, improving delivery velocity by 40% and reducing production defects by 60%.

Integration Developer Intern | Deloitte U.S.I.

Jan 2022 – Jun 2022

Healthcare Technology, Bengaluru

- Built 20+ production Java-based HL7/XML healthcare data integration interfaces using InterSystems HealthConnect; developed MOVEit automation scripts improving data pipeline accuracy by 30%.

PROJECTS

WalletX | Wealth-Partitioning OS

2025

A non-custodial financial OS that lets users architect every rupee across purpose-built partitions: cash, equity, crypto, hard assets, under one unified ledger. Built on a PERN + TypeScript stack chosen for ACID correctness (Postgres NUMERIC, Decimal.js) rather than convenience. Day-0 architecture covers cash partitions, transfers, and a per-partition encryption-key security model.

Stack: TypeScript, React, Fastify, PostgreSQL, Prisma, Redis, Zod

Caffèhop | Coffee discovery and identity platform

2025

A coffee-first discovery and identity platform: sign up, verify, and build a profile around the cafés you visit. Next.js 14 App Router frontend, Express plus MongoDB backend, email and phone OTP with refresh-token rotation. Hashed OTP storage with 10-minute TTL and httpOnly cookie sessions.

Stack: Next.js 14, React 18, Node.js, Express, MongoDB, JWT, Tailwind

CodeLens | Multi-agent code review CLI

2025

A developer tool that runs code reviews through LLMs with a pluggable provider backend (Ollama, Gemini, Mistral) via a clean provider abstraction. RAG pipeline over codebase context with token-by-token SSE streaming, multi-agent orchestration (context agent plus review agent), single-line install with pre-push git hook. Published to npm.

Stack: TypeScript, Node.js, REST APIs, RAG Pipelines, SSE, npm

Stellarcast | Real-time astronomy overlay (Chrome extension) 2025

A Chrome MV3 extension overlaying live astronomical data onto the browser. Service-worker pipeline syncs open APIs every 60 seconds. Renders 8K+ data points via instanced Three.js meshes at 60fps, using spatial hashing for sub-millisecond lookups.

Stack: TypeScript, Chrome MV3, Service Workers, Three.js, WebGL

TECHNICAL SKILLS

Languages	Java, TypeScript, JavaScript, Python, C#, SQL, Go
Backend	Spring Boot, Node.js, Express, Fastify, .NET, REST, GraphQL, Microservices, Event-Driven Architecture, System Design, Distributed Systems
Frontend	React, Next.js, Angular, Three.js / R3F, WebGL, Tailwind CSS, Framer Motion
Data & Infra	PostgreSQL, MongoDB, MySQL, Redis, Elasticsearch, AWS (EC2, S3, Lambda, RDS), Docker, Kubernetes, GitHub Actions, CI/CD
AI & Tooling	RAG Pipelines, LLM APIs (Ollama, Gemini), Multi-Agent Orchestration, Prompt Engineering
Practices	TDD, API Design, Code Review, Observability, Technical Mentorship

AWARDS & RECOGNITION

- **Deloitte Applause Award (2024)** - Highest peer-recognition award at Deloitte, for technical leadership and measurable client impact on a \$2M+ engagement renewal.
- **Deloitte Spot Award (2023, 2026)** - Awarded twice for sustained delivery quality, velocity, and cross-team mentorship.
- **Deloitte Hackathon National Finalist (2023)** - Top 5 of 300+ teams. Presented an AI-powered contract review tool to senior partners.

EDUCATION

B.E., Computer Science | Thapar Institute of Engineering & Technology 2018 – 2022

Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, Software Engineering, OOP.

Head, MUDRA Society: led a 15-member team; tripled participation.
